

The turbo for your dry technology system:

antismell – audible quieter – noticeably more power

With silentpower IONTO-COMED and SÜDA puts for the first time to the market dry technology systems, which neutralize unpleasant odours. Additionally, silent power systems offer even more power and comfort.

silentpower

antismell

The use of an activated carbon filter in the silentpower-systems neutralizes unpleasant odours. This innovation contributes a lot to a hygienic pleasant treatment atmosphere.

silent

Devices in silentpower design with an extremely low noise level up to a maximum of 60 db are significantly quieter than comparable devices. This offers noticeably more comfort to you and your clients.

power

With significantly higher torque, silentpower-systems permit the highest level of reliability also in demanding treatments. Especially in the lower speed range, the hand unit proves extremely reliable, also in treatments where pressure is applied.

These systems have been updated to the latest trends and requirements in dry technology footcare.
